

I will meet once a week with Dr. Ramamoorthi and the other members of the project group to discuss current progress and future goals, and once a week with the rest of the students working under Dr. Ramamoorthi to share this project's progress and learn about everyone else's projects. I will continue the work we started over the summer by implementing new integral approximation methods and testing/data visualization functions. As applicable, I will study papers and graphics resources, either to directly further the project or to advance my own understanding to be better able to contribute.
